solarwinds

Dip, dive, and dodge bandwidth congestion
with Bandwidth Analyzer Pack

TRY IT FREE

Do you have what it takes to fend off today's non-stop barrage of bandwidth consumption? When users complain "the network is slow" or "the internet is down," IT pros need to react quickly and steer clear of downtime by gaining visibility into their complex networks and identifying culprits causing bottlenecks.

SolarWinds® Network Bandwidth Analyzer Pack is a network throughput monitor and throughput tester leveraging NetFlow, J-Flow, sFlow, NetStream, and IPFIX data. Use this powerful bundle of SolarWinds most popular network performance products, Network Performance Monitor (NPM) and NetFlow Traffic Analyzer (NTA), to monitor and analyze network traffic bandwidth. An add-on to NPM, NTA provides actionable insights through alerts and easy to interpret graphs to help you troubleshoot the who, what, and where of traffic consumption.

Keep your eye on the ball with SolarWinds Network Bandwidth Analyzer Pack to see problematic bandwidth issues coming and dodge network slowdowns!
